

Sustainable Development Goals

Industry, Innovation and Infrastructure

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

A comprehensive and sustainable approach to manufacturing, alongside innovation and infrastructure, can unleash dynamic and competitive economic forces that generate job opportunities and income. It plays a key role in introducing and advancing new technologies, facilitating international trade, and enabling the efficient use of resources. However, the world still has a long way to go to fully realize these potentials. In particular, the least developed countries need to accelerate the development of their manufacturing sectors if they wish to achieve the 2030 goals and increase investment in scientific research and innovation.

College of Engineering

Professor Dr. Saad Ali Al-Ta'an, Dean of the College of Engineering at Alnoor University, participated in the activities of the regional conference organized by the American Concrete Institute, representing the Iraq Chapter of the American Concrete Institute, in Dubai, United Arab Emirates. The conference discussed sustainability in the manufacturing and design of concrete and reinforced concrete, as well as the necessary measures to reduce carbon emissions. It included lectures delivered by academics, researchers, and professionals from the concrete manufacturing sector.
