

# Sustainable Development Goals

## Industry, Innovation and Infrastructure

### 9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

A comprehensive and sustainable approach to manufacturing, alongside innovation and infrastructure, can unleash dynamic and competitive economic forces that generate job opportunities and income. It plays a key role in introducing and advancing new technologies, facilitating international trade, and enabling the efficient use of resources. However, the world still has a long way to go to fully realize these potentials. In particular, the least developed countries need to accelerate the development of their manufacturing sectors if they wish to achieve the 2030 goals and increase investment in scientific research and innovation.

Lecturer Laith Yaseen, a faculty member at Alnoor University, participated in the proceedings of the 14th International Scientific Conference on Pure, Applied, and Technological Sciences in Tunisia with a research paper he presented online, titled: "Improving The Ordinary Portland Cement Properties with Glenium 51 And Pistachio Shell Powder Additives." At the end of the conference, the lecturer received a certificate of appreciation along with a scientific medal in recognition of his participation.
