Sustainable Cities and Communities

11 SUSTAINABLE CITIES AND COMMUNITIES

Cities are hubs for ideas, trade, culture, science, production, social development, and other human activities. They play a crucial role in enabling people to achieve social and economic advancement. It is essential to mobilize support to ensure that policymakers are convinced of the need to include access to information in national and regional development plans.

Our university welcomed the field follow-up committee for the “Sustainable University” competition, which visited to review the actual projects submitted by the university as part of its application for the competition. This visit aimed to verify the credibility of the environmental and developmental initiatives that contribute to achieving the Sustainable Development Goals and promoting a green university environment. The committee conducted a comprehensive tour of several sites and initiatives that have been practically implemented on campus, representing a key aspect of the university’s commitment to environmental standards and sustainability. The joint committee was headed by the Director of the Department of Entrepreneurial Projects Management at the Research and Development Department in the Ministry of Higher Education and Scientific Research, and included representatives from the Ministry of Environment. Committee members praised the university’s tangible achievements and qualitative initiatives, which reflect its seriousness and positive engagement with the competition's standards. Our university reaffirms its ongoing commitment to supporting sustainable initiatives and working diligently toward achieving a model, environmentally conscious campus that serves both society and the environment.
