

Sustainable Development Goals

Industry, Innovation and Infrastructure

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

A comprehensive and sustainable approach to manufacturing, alongside innovation and infrastructure, can unleash dynamic and competitive economic forces that generate job opportunities and income. It plays a key role in introducing and advancing new technologies, facilitating international trade, and enabling the efficient use of resources. However, the world still has a long way to go to fully realize these potentials. In particular, the least developed countries need to accelerate the development of their manufacturing sectors if they wish to achieve the 2030 goals and increase investment in scientific research and innovation.

Under the patronage of Professor Dr. Ismail Abdulwahab, Assistant President of Alnoor University for Scientific Affairs, the Electronic Computing Department at the University Presidency organized a developmental workshop for a group of presidency staff entitled “Websites and How to Use Them.” The workshop was conducted by Assistant Lecturer Abdulrahman Abdulkhaliq Mahmood, Director of the Electronic Computing Department, and featured a presentation by Rahma Abbas Fadhel. The aim of the workshop was to enhance the staff’s skills in using websites and to improve their technical proficiency.
