

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

A comprehensive and sustainable approach to manufacturing, alongside innovation and infrastructure, can unleash dynamic and competitive economic forces that generate job opportunities and income. It plays a key role in introducing and advancing new technologies, facilitating international trade, and enabling the efficient use of resources. However, the world still has a long way to go to fully realize these potentials. In particular, the least developed countries need to accelerate the development of their manufacturing sectors if they wish to achieve the 2030 goals and increase investment in scientific research and innovation.

## **Sustainable Development Goals**

## **Industry, Innovation and Infrastructure**

In an unprecedented achievement at the level of Nineveh Governorate that embodies the spirit of innovation and technological leadership, Alnoor University announced the launch of the first smart robot named "RoboNoor," as part of a series of projects within the Artificial Intelligence Laboratory. "RoboNoor" serves as the nucleus of the university's smart transformation and as an advanced interactive interface that welcomes students and responds to their inquiries, offering an exceptional educational experience that simulates the future and enhances the university's position at the forefront of modern educational institutions.
