Quality Education

4 QUALITY EDUCATION

Access to education can enhance quality of life and prepare future leaders who will find solutions to global challenges. Providing education to children in technical, vocational, and entrepreneurial skills will serve as a foundation for sustainable development through scholarships and educational facilities, as well as eliminating gender disparities in access to education.

Quality Education

College of Engineering

The Department of Construction Engineering and Project Management at the College of Engineering, Alnoor University, organized a field visit for third- and fourth-year students to the sites of two major investment projects — the Investment Hospital and the Investment Hotel — located in the Dandan area of Mosul. The visit was supervised by the Dean of the College, Professor Dr. Saad Ali Al-Ta'an, the Head of the Department, Dr. Khalaf Ibrahim, along with several faculty members from the department. This visit comes as part of the college's plan to enhance the practical skills of its students. During the visit, students reviewed the executive and detailed plans of the two projects and learned about the ongoing construction phases and activities at the work sites, providing them with a hands-on opportunity to understand major project execution and management mechanisms. At the end of the visit, technical discussions were held regarding future works and the developmental plans of the projects, in line with Alnoor University's efforts to link academic study with practical application and to prepare engineers equipped with strong field experience and high professional competence to contribute to Iraq's reconstruction and development efforts.
