# Sustainable Development Goals

Quality Education

4 QUALITY EDUCATION

Access to education can enhance quality of life and prepare future leaders who will find solutions to global challenges. Providing education to children in technical, vocational, and entrepreneurial skills will serve as a foundation for sustainable development through scholarships and educational facilities, as well as eliminating gender disparities in access to education.

As part of its mission to support the community and promote sustainable development, Alnoor University has announced the launch of two full scholarship initiatives in distinguished fields, dedicated to students from archaeological and agricultural regions in Nineveh and across Iraq. The first initiative offers scholarships in the Department of Archaeological Tourism / College of Arts, aiming to prepare qualified professionals capable of preserving Iraq's cultural heritage and enhancing cultural tourism. The second initiative covers the Department of Smart Agriculture Engineering and Environmental Systems / College of Technical Engineering, the first of its kind among Iraqi universities, which seeks to train engineers and technicians specialized in smart agriculture applications and environmental protection using modern technologies. These two initiatives reflect the university's commitment to supporting various social groups and strengthening its developmental role in building a sustainable scientific future.
