Climate Action

13 CLIMATE ACTION

No country in the world is immune to the serious effects of climate change. Greenhouse gas emissions continue to rise and are now 50 percent higher than their levels in 1990. Moreover, global warming is causing long-term changes to our climate system, threatening irreversible consequences if we do not take necessary mitigation and adaptation actions today.

Climate Action

College of Engineering

Under the direction of Professor Dr. Saad Al-Ta'an, Dean of the College of Engineering at Alnoor University, and with the presence of a number of officials in Nineveh, the Department of Architecture organized a field visit for its students to the New Forest area. The visit was supervised by Dr. Hatem Qasim Al-Jumaili, Head of the Department, and accompanied by several faculty members. This activity was conducted in cooperation with Aswar Al-Burj Al-Ajy Company and included a tree-planting campaign as part of voluntary work, where students participated in planting several trees and contributing to the expansion of green spaces in the area. The initiative aims to promote a culture of volunteerism among students, develop their sense of environmental responsibility, and link the theoretical aspects of architectural studies with practical field activities that contribute to improving the urban environment and preserving nature.
